Muhammad Tariq Mahmood tariq@koreatech.ac.kr School of Computer Science and Engineering Korea University of Technology and Education

System Stored Procedures

- Many administrative and informational activities can be performed by using system stored procedures.
- The system stored procedures are grouped into the categories shown in the following table.

Category	Description
Catalog Stored Procedures	Used to implement ODBC data dictionary functions and isolate ODBC applications from changes to underlying system tables.
Change Data Capture Stored Procedures	Used to enable, disable, or report on change data capture objects.
Cursor Stored Procedures	Used to implements cursor variable functionality.
Data Collector Stored Procedures	Used to work with the data collector and the following components: collection sets, collection items, and collection types.

System Stored Procedures

Category

Database Engine Stored Procedures

Database Mail Stored Procedures (Transact-SQL)

Database Maintenance Plan Stored Procedures

Distributed Queries Stored Procedures

<u>Filestream and FileTable Stored Procedures</u> (Transact-SQL)

Full-Text Search Stored Procedures

Log Shipping Stored Procedures

Automation Stored Procedures

Policy-Based Management Stored Procedures
Replication Stored Procedures

Description

Used for general maintenance of the SQL Server Database Engine.

Used to perform e-mail operations from within an instance of SQL Server.

Used to set up core maintenance tasks that are required to manage database performance.

Used to implement and manage distributed queries.

Used to configure and manage the FILESTREAM and FileTable features.

Used to implement and query full-text indexes.

Used to configure, modify, and monitor log shipping configurations.

Used to enable standard Automation objects for use within a standard Transact-SQL batch.

Used for Policy-Based Management.

Used to manage replication.

System Stored Procedures

Category

Security Stored Procedures

Spatial Index Stored Procedures

SQL Server Profiler Stored Procedures

SQL Server Agent Stored Procedures

XML Stored Procedures

General Extended Stored Procedures

Description

Used to manage security.

Used to analyze and improve the indexing performance of spatial indexes.

Used by SQL Server Profiler to monitor performance and activity.

Used by SQL Server Agent to manage scheduled and event-driven activities.

Used for XML text management.

Used to provide an interface from an instance of SQL Server to external programs for various maintenance activities.

Catalog Stored Procedures (Transact-SQL)

SQL Server supports the following system stored procedures that implement ODBC data dictionary functions and isolate ODBC applications from changes to underlying system tables.

sp_column_privileges

<u>sp_columns</u>

sp_databases

sp_fkeys

sp_pkeys

sp_server_info

sp_special_columns

sp_sproc_columns

sp_tables

Change Data Capture Stored Procedures (Transact-SQL)

Change data capture makes available in a convenient relational format the historical record of Data Manipulation Language (DML) activity that occurred on enabled tables. The following stored procedures are used to configure change data capture, manage the change data capture Agent jobs, and supply current meta data to change data consumers.

sys.sp_cdc_add_job (Transact-SQL)	sys.sp_cdc_generate_wrapper_function (Transact-SQL)

sys.sp_cdc_change_job (Transact-SQL) sys.sp_cdc_get_captured_columns (Transact-SQL)

<u>sys.sp_cdc_cleanup_change_table (Transact-SQL)</u> <u>sys.sp_cdc_get_ddl_history (Transact-SQL)</u>

sys.sp_cdc_disable_db (Transact-SQL) sys.sp_cdc_help_change_data_capture (Transact-SQL)

<u>sys.sp_cdc_disable_table (Transact-SQL)</u> <u>sys.sp_cdc_help_jobs (Transact-SQL)</u>

<u>sys.sp_cdc_drop_job (Transact-SQL)</u> <u>sys.sp_cdc_scan (Transact-SQL)</u>

<u>sys.sp_cdc_enable_db (Transact-SQL)</u> <u>sys.sp_cdc_start_job (Transact-SQL)</u>

<u>sys.sp_cdc_enable_table (Transact-SQL)</u> <u>sys.sp_cdc_stop_job (Transact-SQL)</u>

Database Engine Stored Procedures (Transact-SQL)

SQL Server supports the following system stored procedures that are used for general maintenance of an instance of SQL Server.

```
sp_add_data_file_recover_suspect_db
                                          sp_execute
sp_add_log_file_recover_suspect_db
                                          sp_executesql
sp_addextendedproc
                                          sp_getapplock
sp_addextendedproperty
                                          sp_getbindtoken
sp_addmessage
                                         sp_help
                                          sp_helpconstraint
sp_addtype
sp_addumpdevice
                                         sp_helpdb
sp_altermessage
                                          sp_helpdevice
                                          sp_helpextendedproc
sp_attach_db
sp_attach_single_file_db
                                         sp_helpfile
                                          sp_helpfilegroup

Database Maintenance Plan Stored Procedures (Transact-SQL)

Microsoft SQL Server supports the following system stored procedures that are used to set up maintenance tasks. These stored procedures are used with database maintenance plans.

sp_add_maintenance_plan
sp_add_maintenance_plan_db
sp_add_maintenance_plan_job
sp_delete_maintenance_plan

sp_delete_maintenance_plan_db
sp_delete_maintenance_plan_job
sp_help_maintenance_plan

Security Stored Procedures (Transact-SQL)

SQL Server supports the following system stored procedures that are used to manage security. Some of these stored procedures are deprecated but continue to be available to support backward compatibility.

sp_addapprole (Deprecated)
